

Namma-Vastra

AI Powered Handloom Marketplace & Trend Guide

Project Overview:

Namma-Vastra is an AI-powered Android application developed to support traditional handloom weavers such as Ilkal and Molakalmuru artisans. The application helps weavers directly connect with modern customers and fashion markets without depending on wholesalers.

1. Problem Statement

Traditional handloom weavers create high-quality sarees but struggle due to low profit margins, lack of fashion trend awareness, and dependency on wholesalers.

2. Proposed Solution

Namma-Vastra provides a digital platform where weavers can upload saree photos, view fashion trends, calculate fair prices, and directly connect with customers through WhatsApp.

3. Main Features

- Trend Board for trending colors and modern designs
- Loom Gallery for saree uploads
- Smart Price Calculator
- WhatsApp Inquiry System
- Weaver Story Section

4. Technology Stack

- Android Studio
- Kotlin / Java
- Firebase Firestore
- Firebase Storage
- Coil Image Loading Library

5. System Architecture

User → Android App → Firebase Authentication → Firestore Database → Firebase Storage → Loom Gallery → WhatsApp Inquiry

6. Objectives

- Empower traditional weavers
- Increase artisan profits
- Preserve Indian handloom culture
- Promote self-employment

7. Future Enhancements

- AI Fashion Recommendation
- Online Payments
- Multi-language Support
- AR Saree Try-On

8. Conclusion

Namma-Vastra combines AI concepts, Android development, and traditional weaving culture into one smart digital platform. The application empowers artisans and modernizes the handloom industry.

9. Module Description

Module	Description
Trend Board	Displays modern saree trends and colors
Loom Gallery	Upload and display saree images
Price Calculator	Calculates fair retail price
Weaver Story	Displays handloom heritage
WhatsApp Inquiry	Direct communication with customers
